Work Experience

Salesforce Developer

Dec 2021 - present

Tata Consultancy Services • Full-time

Chennai, India

Technologies: Admin, Apex, Salesforce Flows, Trigger, Salesforce Security, Production support

Project roles and responsibilities: Salesforce developer and Technical Support

- Created custom fields, page layouts, and validation rules to ensure accurate data entry and maintain data integrity.
- Designed and managed Profiles, Permission sets, and User management for secure access control.
- Built record-triggered flows to update fields dynamically and create related records based on business logic.
- Developed screen flows for guided record creation with limited fields to improve user experience.
- Implemented Apex triggers to update record values and enforce complex business rules.
- Provided CPQ production support by assisting customers in configuring opportunities with the correct reseller and distributor, ensuring accurate quote setup with appropriate asset line items.
- Validated asset configurations against business rules and resolved discrepancies to maintain compliance and quoting accuracy.
- Facilitated quote approval workflows by routing requests to the correct approver or queue, ensuring timely processing and minimal delays.
- Created custom reports and dashboards for actionable insights.
- Performed bulk updates for multiple object records using the Data Loader and Salesforce Inspector, ensuring data accuracy and consistency.
- Configured Email-to-Case functionality and managed Case Management workflows to resolve customer issues efficiently.
- Participated in Salesforce org storage cleanup activities by identifying and deleting obsolete system logs, helping optimize storage utilization and improve overall org performance.
- Supported Salesforce org refresh activities by documenting critical pre-refresh configurations (URLs, email delivery settings, etc.) in Excel and manually restoring them after the refresh to maintain system continuity.
- Provided post-deployment support and issue resolution using JIRA for logged incidents.

Key Skills:

- Salesforce Sales Cloud, Service Cloud, CPQ,
- Apex Triggers, Flows (Record-Triggered & Screen Flows), Validation Rules, Profiles & Permission Sets,
- Data Loader, Salesforce Inspector, JIRA, Custom Reports & Dashboards.
