Summary

Salesforce Developer with 4+ years of experience across Sales Cloud, Service Cloud, and CPQ, combining hands-on Apex and Flow-based automation development with production support, deployment validation, and sandbox environment management. Experienced in building declarative and programmatic solutions to solve data-integrity and process-automation problems, with a strong background in incident resolution and release support in enterprise Salesforce orgs.

Experience

Salesforce Developer | Technical Support Engineer -- TCS

Dec 2021 – Present

- Developed Apex Triggers and custom automation to implement business logic not achievable through declarative tools across multiple custom objects.
- Built a Lightning Web Component to display related record data on a datatable, passing the recordId to an Apex controller that queried and returned the relevant records for dynamic rendering on the page.
- Built a Screen Flow to simplify Contact creation, surfacing only required fields instead of the full standard layout to reduce data entry errors.
- Built a Record-Triggered Flow to auto-populate Contact owner assignment, billing address, and account-tier flags from the related Account record immediately after creation, ensuring data consistency across parent-child records.
- Configured custom objects, fields, page layouts, and validation rules to support evolving business requirements.
- Administered Profiles, Roles, Permission Sets, and user access following Salesforce security best practices.
- Provided Salesforce CPQ production support — configuring opportunities, validating asset line items against business rules, and resolving quoting discrepancies to maintain accuracy and compliance.
- Supported quote approval routing to appropriate approvers/queues, minimizing approval delays.
- Led production support: triaged and resolved incidents via JIRA, performed root-cause analysis, and coordinated fixes with dev/QA teams.
- Validated configuration and ran smoke testing pre/post-deployment to confirm release stability; monitored post-release for immediate issue response.
- Managed sandbox refresh cycles — documenting and restoring critical settings (URLs, email deliverability, Connected Apps, Remote Site Settings) for dev/UAT readiness.
- Built reports and dashboards to support business decision-making; performed bulk data operations via Data Loader and Salesforce Inspector.
- Configured Email-to-Case and case management workflows to improve support operations.

Skills

Development:

Apex
Apex Triggers
Salesforce Flows (Record-Triggered & Screen Flows)
Lightning Web Components (LWC)
Validation Rules

Administration & Security:

Salesforce Administration
Profiles
Roles & Permission Sets
User Management
Salesforce Security

Platform & Clouds:

Sales Cloud
Service Cloud
Salesforce CPQ

Support & Operations:

Production Support
Incident Management
Deployment Support
Sandbox Refresh
Data Migration
Case Management
Email-to-Case

Tools: Data Loader

Salesforce Inspector

JIRA

Microsoft Excel

Certifications

- Salesforce Certified Platform Developer I
- Salesforce Certified Administrator
- Salesforce Certified Platform Foundations
